

AMENDMENTS TO THE SPECIFICATION

Please amend the previously amended paragraph at page 3, lines 16-19, as follows:

More specifically, the stereotactic frame according to the invention includes a frame configured to be mounted onto a nasion of a subject being examined and extending frontally below the eyes of the subject to end positions that are in front of the face of the subject and outside a field of vision of the subject, and at least three ~~fidicual~~ fiducial markers mounted on the frame and configured to define a position of the frame with respect to the subject. Furthermore, the method according to the invention for supporting a stereotactic frame, which includes mounting a stereotactic frame onto a nasion of a subject being examined, provides a stereotactic frame extending frontally below the eyes of the subject to end positions that are in front of the face of the subject and outside a field of vision of the subject, defining a position of the stereotactic frame with respect to the subject via at least three ~~fidicual~~ fiducial markers mounted on the frame, and performing a diagnosis of the subject based on the defined position of the stereotactic frame with respect to the subject.
